

This is a simple web app called Item Manager. It lets users add, see, update, and delete a list of items. The app uses Express for the server and shows the items in a web page.

This webpage allows you to

- Add Items
- View Items
- Update Items
- Delete Items

I did use an AI tool to help me with this project, I used ChatGPT. I used ChatGPT because I was confused about why I kept getting an error with starting my server, so I asked it for help and why it wasn't working.
